

Reference: Vebko AMT105

To whom it may concern,

I Purchased the Vebko AMT105 in September 2020 and have been working with it along side the Omicron CMC356 since then. During the first few weeks of utilising the Vebko, I had to be in touch with their customer support just to fully understand the HMI and the processes.

The customer support I received has been both professional and of excellent quality, quickly information me of how the achieve my required requirements. The customer support being 24/7 is a massive advantage and it is what will lead me to purchase more equipment from this brand.

Being an advance protection relay test engineer, I used to utilise the OCC file structure of the omicron, however with the VCC structure of the Vebko being not too dissimilar, I was quick to be able to pick up the required knowledge to build VCC files in the same way as OCC files.

With the equipment being both rugged enough for use on site and accurate enough to use within a laboratory, there really is no other device that come close within the same price range.

From my experience over the last 3 months of using and operating this equipment and the 24/7 customer support, Vebko are second to none and they come highly recommended by me.

Vebko Control Centre (VCC).

Quick and easy to produce test sequences for many different applications, all functions within the VCC module are brilliant.

Transformer Tests.

Quick to understand and brilliant reporting, I have used this on 8 transformers to date and the outcome from my clients is brilliant.

Current Transformer Tests.

Including this into the one unit is genius. Meaning that I can carry one piece of equipment to test lots of applications. CT testing is quick and easy.

Circuit Breaker Tests.

Analysing Circuit breakers using the Vebko is quick easy and to the point, the report is clear and easy to understand.

With all the great features and the 24/7 support and the cost, why would anyone buy anything else.

Kindest Regards

VEBCO COMPANY
IRAN

REFERENCE LETTER

Our company has been using VEBCO AMT105 tester for almost a year. The device works very well for our work. We use it for all kinds of checks, e.g. protection of transformers and lines. The device is easy to use.

It is also worth paying attention to good contact with the VEBCO COMPANY and 24-hour technical support.
